

Your New Solution for Image Post Processing

MedQuest Radiology Management Services

Post processing of images delivers valuable information for diagnostic and treatment purposes, but it requires expensive software that often is not included with a CT or MR, as well as specially trained technologists to perform the study.

MedQuest's state-of-the-art Imaging Lab has the up-to-date software and highly trained, experienced technologists to provide this service for you, with results delivered in less than an hour. MedQuest eliminates mailing disks and waiting days for the results, with no need for a special VPN or other technology.

Why Post Processing?

- Improve the quality of care and diagnostics
- Increase your revenue stream
- Increase patient and referring physician satisfaction with fast turnaround

Why MedQuest?

- Deep experience
- Vendor-neutral
- Your machine, your revenue
- You can do the interpretation – and retain the fee

Avoid Committing Insurance Fraud

There are some examinations that require specific post-processing images in order to bill a CPT code, including CT calcium scoring, MRAs and CTAs. Failure to perform post processing can lead to charges of insurance or Medicare fraud.

Your Patients Will Thank You

With MedQuest services and your existing equipment, you can provide in-depth diagnostic imaging studies that meet the needs of patients and referring physicians. No longer will you have send patients to another facility or ask them to wait until results are mailed back.

MedQuest – Proven Expertise

MedQuest owns and operates freestanding imaging centers and provides management services to hospitals, outpatient radiology centers and physician practices with radiology. MedQuest's Imaging Lab services the company's numerous locations, providing post processing for 20,000 studies a year from scanners of multiple vendors. With MedQuest, you can be assured that well-trained technologists are processing your studies using the very latest software, and that each post processing study meets the standards of the American College of Radiologists.

Post Processing Services

3D imaging

Curved reformations

Volume measurements

Cardiac calcium scoring

Vessel tracking with calculation of stenosis

Maximum intensity projections (MIPs)
